The colour of life (*Motion picture*) National Film Board of Canada, Ottawa, 1955.
24 min., sd., color, 16 mm.
Summary: Discusses the growth of a swelling, the sensual upsurge of life in a giant forest tree, and the mysterious alchemy of a single leaf. Presents, in magnified dimension, the maple leaf and segments of the tree to illustrate the physiological processes that go on in all plants. Through detailed time-lapse photography and animated diagrams, reveals the silent, methodical way in which nature makes the woodlands green in springtime and bright colored in autumn.
Credits: Production, direction, and commentary, J. V. Durden; narrators, Tom McBride, Elwood Glover; diagrams and animation, Evelyn Lambart, Robert Verrall; music score, Robert Fleming; photography, R. D. Muir; film editor, Douglas Robertson.

Community responsibilities (*Motion picture*) National Film Board of Canada, Ottawa, 1955.
11 min., sd., b&w, 16 mm. (What's your opinion? No. 1)
French version released under the title Que pensez-vous du sens social?
Summary: Poses the question of where a person's duty to the community ends and where obligation to self or family begins when apportioning spare time and energy. When a member of an urban community is approached by two of his neighbors to head a worthwhile community project, he declines on the grounds that one such commitment leads to another to the extent of infringing on personal freedom. One of his neighbors feels he is shirking responsibility in resisting community pressure. The audience is invited to decide the matter.

Competition and dominance in rats (*Motion picture*) O. Hobart Mowrer, Jerome S. Kornreich and I. Yoffe, 1940. Released by Psychological Cinema Register, Pennsylvania State University.
13 min., si., b&w, 16 mm.
Summary: From an "economy of abundance," rats are put into a situation where competition for food is essential. At first the rats behave very similarly. They compete but do not fight. When insufficient food for complete satisfaction is given, savage fighting develops. Explains that a definite dominance hierarchy soon emerges, and personality typing, based on this kind of social experience, seems to be relatively permanent.

Countries of Rio de la Plata (*Filmstrip*) Popular Science Pub. Co. Released by McGraw-Hill Book Co., 1955.
53 fr., color, 35 mm. (Regions and countries of South America)
A Richard Nelson travel strip.
Eastman color.
With teaching guide.
Summary: A study of Argentina, Uruguay, and Paraguay, showing the chief features, products, and resources of each. Shows the three main divisions of Argentina: the Pampas with its cattle, wheat, and corn economy; the Gran Chaco with its hot climate and quebracho production; and Patagonia with its sheep raising. Indicates the importance of meat packing and export to Argentina. Shows Uruguay as a small democratic land with sheep as the mainstay of its economy. Shows that despite the poverty of Paraguay, it produces horses, cotton, hides, meat, coffee, yerba mate tea, fine lace, and kapok. Visits the capitals of Buenos Aires, Montevideo, and Asuncion. Captioned photographs, drawings, and maps.

Denture service (*Motion picture*) Minnesota University Audio-Visual Education Service, 1939.
45 min., si., color, 16 mm.
Summary: Shows a type of denture which was developed by the Dental Dept. of the University of Minnesota in 1939. Describes the anatomy of the mouth, showing upper and lower ridges and the area to be covered. Shows the impression technique step-by-step, from the placing of the modeling compound in the mouth through post damming, muscle trimming, and plaster wash. Points out that the natural relationship of the upper to the lower jaw is preserved by means of trial plates, and an edging of plaster and carborundum permit the patient to grind them to a perfect fit. Explains that after grinding, the trial plates are locked together, removed from the mouth, and used for a model in setting up the teeth. Depicts the patient with both the old and new types of denture.

The desperate heart (*Motion picture*) Hyperion Pictures. Released by Brandon Films, 1951.
11 min., sd., b&w, 16 mm.
Based on the poem by John Malcolm Brinnin.
Summary: The American dancer, Valerie Bettis, presents a modern dance interpretation of loneliness and longing on the loss of a beloved. Employs a variety of film techniques to give depth and stress to the mood and meaning of the dance, interweaves extreme close-ups, double exposures, and long-shots to accent the rhythmic pattern of the dance itself. Miss Bettis also reads the poetry accompaniment.

Dissociative effects of curare (*Motion picture*) Edward Girden, 1939. Released by Psychological Cinema Register, Pennsylvania State University.
12 min., si., b&w, 16 mm.
Summary: Discusses conditioned responses established in curarized dogs. Shows responses manifested only during the curare period, being suppressed after recovery from the drug, and reappearing during subsequent curare states. Conversely, shows that conditioning in a normal animal is suppressed during curarization and appears only in the normal state. Suggests that neurological mechanism for curare-state conditioning is subcortical, whereas normal learning involves the cortex.

Dominance, neurosis and aggression in cats (*Motion picture*) Jules H. Masserman and P. W. Siever, 1943. Released by Psychological Cinema Register, Pennsylvania State University.
30 min., sd., b&w, 16 mm.
Summary: Presents the interrelationships of dominance, neurosis, and aggression in cats trained in groups of four to compete for food after a bell-light signal to which they have been previously conditioned individually. A stable dominance hierarchy develops, and individual cats secure food repeatedly without fighting. When the dominant cat is displaced by a more dominant animal, or is made experimentally neurotic, aggressive fighting occurs. Goal-directed behavior deviates into aggression mainly directed against those animals higher in the hierarchy. The use of amytal temporarily mitigates the neurosis, and restores the nonaggressive dominance. Concluding subtitles summarize the interrelationships.

Dynamic stability and control characteristics of a ducted-fan model in hovering flight (*Motion picture*) U. S. National Advisory Committee for Aeronautics, 1954.
6 min., si., b&w, 16 mm.
Summary: Illustrates the results of flights of a simple ducted-fan model in a free-flight tunnel investigation to provide some basic information on the stability and control of jet vertically rising airplanes in hovering flight. The model consists of an 18-inch diameter dual-rotating propeller in a shroud 4 feet long. Control is provided by all-movable surfaces at the rear of the shroud. The investigation consists mainly of flight tests with the model hovering at altitude and near the ground. For technical personnel, to be used with NACA Research memorandum L54C18: Dynamic stability and control characteristics of a ducted-fan model in hovering flight.
1. Vertically rising aeroplanes. I. U. S. National Advisory Committee for Aeronautics.
U. S. Office of Education. — Fi E 55–325; *629.133 629.13936 — Visual Education Service

Dynamics of an experimental neurosis. Part I: Conditioned feeding behavior and induction of experimental neuroses in cats (*Motion picture*) Jules H. Masserman, 1944. Released by Psychological Cinema Register, Pennsylvania State University.
21 min., si., b&w, 16 mm.
Summary: Shows an apparatus for releasing pellets of food into a foodbox, and cats being trained to respond to a light or a bell signal by going to the food box, lifting the lid, and obtaining the food. Motivational conflict is then induced by a blast of air as the cat is obtaining food. Shows results of the experiment: inhibition of feeding, other inhibitions, sensory hyperaesthesias, specific phobias, motor disturbances, recurrent physiological signs of anxiety, and other neurotic patterns.
1. Neuroses. I. Masserman, Jules Hymen, 1905– II. Pennsylvania. State University. Psychological Cinema Register.
Penn. State Univ. — 616.85 — Fi A 55–1218 — Audio-Visual Aids Library

Dynamics of an experimental neurosis. Part II: Effects of environmental frustrations and intensification of conflict in neurotic cats (*Motion picture*) Jules H. Masserman, 1944. Released by Psychological Cinema Register, Pennsylvania State University.
16 min., si., b&w, 16 mm.
Summary: Contrasts various types of environmental frustrations with those produced by experimental conflict. Shows that increasing the hunger drive, or constricting the reactive field of an animal by barriers differing in frustration value, accentuates neurotic behavior, but if the animal resolves the impasse or escapes from the situation, many symptoms are alleviated.
1. Neuroses. I. Masserman, Jules Hyman, 1905– II. Pennsylvania. State University. Psychological Cinema Register.
Penn. State Univ. — 616.85 — Fi A 55–1219 — Audio-Visual Aids Library

Dynamics of an experimental neurosis. Part III: Experimental diminution of neurotic behavior in cats (*Motion picture*) Jules H. Masserman, 1944. Released by Psychological Cinema Register, Pennsylvania State University.
19 min., si., b&w, 16 mm.
Summary: Demonstrates four therapeutic techniques: diminution of one of the conflicting drives (animal is fed before being put in a cage), retraining in a problem situation (petting, gentle handfeeding, and reassurance), environmental press (animal with maximally reinforced hunger drive is brought toward food by a movable barrier), and social example (a normal cat which has learned to feed at a signal is placed in the cage with a neurotic animal).
1. Neuroses. I. Masserman, Jules Hyman, 1905– II. Pennsylvania. State University. Psychological Cinema Register.
Penn. State Univ. — 616.85 — Fi A 55–1221 — Audio-Visual Aids Library

Dynamics of an experimental neurosis. Part IV: Active participation in establishing more satisfactory adjustment (*Motion picture*) Jules H. Masserman, 1944. Released by Psychological Cinema Register, Pennsylvania State University.
20 min., si., b&w, 16 mm.
Summary: Presents the therapeutic technique of actively participating in establishing a satisfactory adjustment. Normal animals learn to activate a food signal by pressing switches, show varying frustrational behaviors when constrained by barriers or when thwarted by the failure of switches, and recover the habit when the original situation is restored. When subjected to an air blast, cats develop mild neuroses; some, at first avoiding the switch, gradually re-explore until they re-establish self-signaling and feeding pattern despite repetitions of the blast.
1. Neuroses. I. Masserman, Jules Hyman, 1905– II. Pennsylvania. State University. Psychological Cinema Register.
Penn. State Univ. — 616.85 — Fi A 55–1220 — Audio-Visual Aids Library

Dynamics of competition in cats: Inter-cat relationships in a manipulative feeding situation (*Motion picture*) Jules H. Masserman, 1944. Released by Psychological Cinema Register, Pennsylvania State University.
15 min., si., b&w, 16 mm.
Summary: Presents manifestations of interrelationships among cats, previously trained to manipulate a switch which releases food pellets into their foodbox. Put into an experimental cage in pairs, they develop patterns of cooperation, conflict, dominance, and active and passive parasitism. Points out that these manifestations parallel somewhat those in interhuman relationships.

The earth satellite, a man-made moon (*Filmstrip*) Film Strip-of-the-Month Clubs, 1956.
42 fr., color, 35 mm.
Eastman color.
Prepared in cooperation with the editors of Popular science monthly.
With teaching guide.
Summary: Outlines the plan of the United States Government to launch man-made satellites from Patrick Air Force Base in Florida. Describes the satellites, the rockets to be used in launching them, and possible methods of releasing the satellite from the rocket nose. Explains that the gravitational force of the earth will balance the straight-line inertia of the satellite to form an orbit. Discusses the value of the satellites in gathering scientific data. Captioned drawings.

14 min., si., cover, 16 mm.
Summary: Shows two demonstration experiments. In the first, two white rats are conditioned in a grill box to display anxiety at the sound of a clicker. One animal then receives E. C. S., the other receives pseudo E. C. S.; direct comparisons show loss of anxiety response in the first animal, retention in the second. In the second experiment, two additional animals, who have learned the lever pressing habit in the grill box, are conditioned by shock to terminate pressing at the sound of the clicker. The conditioning is destroyed in the experimental animal by E. C. S., but remains intact in the control animal (pseudo E. C. S.)

Effect of infantile feeding-frustration on adult hoarding in white rats (*Motion picture*) J. McV. Hunt, Harold Schlosberg, Richard L. Solomon, and Eliot Stellar, 1949. Released by Psychological Cinema Register, Pennsylvania State University.
15 min., si., b&w, 16 mm.
Summary: The split-litter technique provides experimental and control groups. Experimental animals are frustrated in feeding for 15 days. As adults, five months later, both groups are given hoarding tests. Shows adult feeding frustration, and hoarding tests after adult feeding frustration. In four different experiments, adult rats submitted to feeding frustration in infancy hoarded more than those in the control group.
1. Frustration. 2. Animal intelligence. I. Hunt, Joseph McVicker, 1906– II. Schlosberg, Harold, 1904– III. Pennsylvania. State University. Psychological Cinema Register.

Effect of Serpasil (Reserpine) on monkeys (*Motion picture*) Research Dept. of Ciba Pharmaceutical Products. Released by Sturgis-Grant Productions, 1954.
15 min., sd., color, 16 mm.
With reprint of the narration.
Summary: Demonstrates, by a photographic laboratory report, the difference between the sedative action of two totally dissimilar drugs. Shows how Serpasil tranquilizes and insulates the normal rhesus monkey against his environment to the extent that he can be handled safely yet remains aware of his surroundings and is capable of a coordinated response to food and physical stimuli. Explains that the animal treated with a barbiturate is either brought to a state of anesthesia or, at a lower dose level, exhibits uncoordinated activity indicating detachment from his environment.

Effects of direct interrupted electroshock on experimental neuroses (*Motion picture*) Jules H. Masserman, C. Pechtel, A. Arieff, H. Klehr, and S. Greene, 1950. Released by Psychological Cinema Register, Pennsylvania State University.
19 min., si., b&w, 16 mm.
Summary: Shows how sixty-cycle electroshock therapy relieves experimental neuroses, but also produces disintegration of normal behavior. Investigates direct square-wave (Leduc) electroshock therapy in the context of standard Masserman procedure. Points out the typical results: disintegration again of both neurotic and adaptive behavior, but to a less marked degree in both cases than with 60-cycle electroshock.
1. Neuroses. 2. Shock therapy. I. Masserman, Jules Hymen, 1905– II. Pechtel, C. III. Pennsylvania. State University. Psychological Cinema Register.

Effects of electrical stimulation and destruction of the hypothalamus in the cat (*Motion picture*) Jules H. Masserman, 1940. Released by Psychological Cinema Register, Pennsylvania State University.
25 min., si., b&w, 16 mm.
Summary: Demonstrates hypothalamic stimulation through electrodes inserted by the Horsley-Clark stereotactic technique in acute and recovery preparations. Tachycardia, vascular hypertension, mydriasis, piloerection, vocalizations, clawing and running movements, and other sympathetic and motor responses are produced; in recovery preparations these constitute typical "sham rage." Explains that bilateral destruction of the hypothalamus causes stupor and catalepsy, with subsequent diminution and disintegration of emotional mimetic responses; although adequate stimulation in recovery animals shows that these are not abolished. Shows that perihypothalamic stimulation produces partial effects which are diminished by intravenous amytal but not by direct injection of the drug.

Effects of electroshock therapy on experimental neuroses (*Motion picture*) Jules H. Masserman and Mary Grier Jacques, 1945. Released by Psychological Cinema Register, Pennsylvania State University.
20 min., si., b&w, 16 mm.
Summary: Normal cats, subjected to cerebral electroshock, show impairment of complex and recently learned response patterns, as compared with relative persistence of simpler forms of adaptive behavior. Cats, made experimentally neurotic by motivational conflicts then subjected to electroshock, show similar disorganisation of complex inhibitions, compulsions, and phobias, thus releasing more nearly normal goal-directed behavior. Points out that such alterations of conduct cannot be correlated with pathologic changes in the brain detectable by standard histologic techniques.
1. Neuroses. 2. Shock therapy. I. Masserman, Jules Hymen, 1905– II. Jacques, Mary Elizabeth (Grier) 1912– III. Pennsylvania. State University. Psychological Cinema Register.

Effects of morphine on learned adaptive behavior and experimental neurosis in cats (*Motion picture*) Jules H. Masserman and A. Wikler, 1942. Released by Psychological Cinema Register, Pennsylvania State University.
17 min., sd., b&w, 16 mm.
Summary: Normal cats are trained to depress a platform switch which activates a feeding signal, and then to squeeze past a barrier to the feeding box. When morphine is administered, more complex and recently acquired behavior disappears, and the cats finally ignore food entirely. In three to four hours, learned behavior reappears but in the reverse order of its disappearance. In cats made neurotic, an injection of morphine produces a temporary abolition of neurotic behavior and the appearance of previously learned adaptive patterns. As the effects wear off, the neurotic behavior tends to reappear.

Embryology and pathology of the intestinal tract (*Motion picture*) William H. Snyder and Lawrence Chaffin, 1954. Made by Graphic Films Corp., 1953.
14 min., sd., color, 16 mm.
Summary: Presents the development and rotation of the intestinal tract as it occurs in the human embryo from the fourth to the eleventh week, and correlates arrests in this developmental process with resulting clinical anomalies. Includes one chance embryo which reveals intestine within the cord and the abdomen. Depicts the position and development of the intestine and traces the development of the straight midline intestinal tube into its miniature adult form. Utilizes clinical material including 158 cases of anomalies studied at the Los Angeles Childrens Hospital during a fifteen-year period.

The enchanted miller (*Motion picture*) Czechoslovak State Film, Prague. Released in the U. S. by Official Films, 1952.
10 min., sd., color, 16 mm.
Summary: When a water demon enchants a mill and puts the workers to flight, they turn to a stranger for aid. He attacks the demon and succeeds in disenchanting the demon by cutting off its coat tails and changing it back to human form.

Experimental masochism (*Motion picture*) Jules H. Masserman, 1946. Released by Psychological Cinema Register, Pennsylvania State University.
10 min., sl., b&w, 16 mm.
Summary: Cats are trained to depress a switch which delivers an air blast (or electric shock) followed by food. With moderate shock, the cats continue to operate the switch while food is withheld. Explains that this self-punitive adjustment is interpreted as involving masochistic factors, but when the shock is excessive, or if food is indefinitely withheld, the behavior is extinguished or neuroses develop.
1. Masochism. 2. Animal intelligence. I. Masserman, Jules Hymen, 1905– II. Pennsylvania. State University. Psychological Cinema Register.

Experimental "neurosis" in a dog (*Motion picture*) W. H. Grantt and A. H. Leighton, 1939. Released by Psychological Cinema Register, Pennsylvania State University.
10 min., si., b&w, 16 mm.
Summary: Shows a dog in which a chronic disturbance had been produced by difficult differentiation of food signals. Explains that the anxiety-like state had lasted for seven years making possible a study of total behavior. Shows marked changes in respiration, accompanied by penile erection, negativism, refusal of food, whining, and barking, as the animal reacts in the experimental situation. A drastic change of environment temporarily relieves the symptoms. Shows comparison with a stable animal.
1. Neuroses. 2. Grantt, W. H. II. Leighton, Alexander Hamilton, 1908– III. Pennsylvania. State University Psychological Cinema Register.

Experimentally produced neurotic behavior in the rat (*Motion picture*) N. R. F. Maier and N. M. Glaser, 1938. Released by Psychological Cinema Register, Pennsylvania State University.
25 min., si., b&w, 16 mm.
Summary: By using the Lashley jumping technique rats are trained to discriminate in a two-window situation. After the animals establish definite discriminations they are faced with only one window, in which is placed a negative card used in training. A stream of air directed behind the animals forces jumps to the negative card. Some rats find a way out via shortest behavior, jumping forward shield near the card. Others develop behavior which is at first resistant and retiring, but culminating in neurotic outburst with violently exaggerated running and hopping, and eventual tics, tonic rigor, and plasticity.

Experimentally produced "social problem" in rats (*Motion picture*) O. Hobart Mowrer, 1939. Released by Psychological Cinema Register, Pennsylvania State University.
11 min., si., b&w, 16 mm.
Summary: Depicts a social problem created by placing three rats in a Skinner box with the lever some distance from the food trough. At first any rat pressing the lever finds that the food has been eaten by others. Violent fighting over the empty trough ensues. Finally one rat discovers a way to obtain food for all three by depressing the lever several times. Points out that with this rat as the worker and the other two as parasites, class society has emerged.

The face of the land (*Filmstrip*) Life, 1954. Made by Colortech Films.
68 fr., color, 35 mm. (The world we live in, no. 3)
Eastman color.
Based on The world we live in, pt. 3, which appeared in Life magazine, Apr. 12, 1953.
With lecture notes.
Summary: Captioned photographs and drawings are used to describe the forces which have changed the face of the earth throughout geologic history. Traces the geologic history of the present site of New York City from the period 300 million years ago when volcanoes and sea covered the area, through the formation of the primitive Appalachian Mountains 200 million years ago, until the recession of the glaciers 20,000 years ago at which time the area was left much as it is today. Describes physical forces of unheaval which operate beneath the surface of the earth and the various types of mountains formed by these forces of uplift; describes how mountains are worn away by water, wind, and ice.
Credits: Captions adapted from the original text by Lincoln Barnett; illustrations by Simon Greco based on drawings by Vincent Kotschar; photographs by Andreas Feininger and others.

Fallen eagle (*Motion picture*) P. Lorillard Co. Made and released by Alan Shilin Productions, 1952.
21 min., sd., color, 16 mm. (The first Americans)
Summary: An account of the culture and history of the Sioux Indian. From the Sioux point of view describes them as the only opponent in U. S. history that threw times annihilated American military forces, and tells why they became our enemy. Shows that it was the white man's ploughing of the plains and exterminating of buffaloes that finally caused the downfall of the Sioux. Contrasts their present day existence with their once proud heritage, and indicates a promise of restitution through a Government program for the area in which they live.

Fears of children (*Motion picture*) Mental Health Film Board for Oklahoma State Dept. of Health. Produced by International Film Foundation. Released by International Film Bureau, 1951.
28 min., sd., b&w, 16 mm. (Emotions of every-day living, no. 3)
Summary: The experiences of a little boy caught between an over-protective mother and a domineering father. The parents' gradual acceptance of the boy as an individual demonstrates that well-motivated adults can follow factual advice on child-rearing even though it may conflict with their pattern of doing things. For parents and educators, nurses, medical students, pediatricians, students of psychology, and patients in analytic group therapy.

Feeding habits (*Filmstrip*) Canada Dept. of National Health & Welfare, Ottawa. Made and released by National Film Board of Canada, 1956.
23 min., color, 35 mm. (Child training series)
With manual.
Summary: Explains the importance of building good feeding habits as part of a child's emotional development. Discusses the underlying causes of emotional feeding problems, some of which are unwittingly created by the parents themselves, such as mealtime bickering, unimaginative food preparation, parental nagging, forced feeding, outside distractions, bad eating habits of grown-ups, and indulgence of a child's whims. Suggests the serving of small portions of attractively prepared food, removing uneaten portions without fuss at the end of the meal; recommends that only fluids be allowed between meals, and that parents refrain from discussing feeding problems in front of the child.
Credits: Producer, Hugh O'Connor; director and writer of commentary, Joseph Koenig; drawings, J. Simpkins.

Film fun (*Motion picture*) RKO-Pathe, 1955.
9 min., sd., b&w, 35 mm. (Screenliner)
Summary: Humorous commentary accompanies sequences from three early silent films. In A helping hand, or One good turn deserves another, starring Lionel Barrymore, Lillian Gish, and Harry Carey, a tramp saves the life of a doctor. In A girl's bravery, or Saved by the bell, a girl prevents her soldier-lover's execution by interfering with the ringing of a curfew bell. In The policeman's dilemma, or Call a cop, starring Owen Moore, a policeman is forced to arrest his own thieving brother.
Credits: Producer, Burton Benjamin; narrator, Ward Wilson; music, Herman Fuchs.

Fitness is a family affair (*Motion picture*) Physical Fitness Division, Dept. of National Health and Welfare, Ottawa. Made and released by National Film Board of Canada, 1948.
19 min., sd., b&w, 16 mm.
French version released under the title Récréation en famille.
Summary: Shows how neighbors, by pooling their resources, can find new interests and enrich community living. Contrasts two families in a neighborhood—one with no sense of unity, and one in which the members work together, sharing the business of living. Explains that the cooperative ideas of the latter prove infectious and spread through the district until the first family is persuaded to try them also.
Together, people of the neighborhood discover new kinds of fun and recreation, beginning with a games-room, a workshop, and a handicraft group, and a community spirit comes spontaneously to life.
